

What is an RCDD®?

Registered Communications Distribution Designer (RCDD®) is a designation for individuals who demonstrate expertise in the design, integration, and implementation of telecommunications (voice, data, video, audio, and other low-voltage control) transport systems and their related infrastructure components. An RCDD is responsible for the detailed design of new systems and/or the integration of a design into an existing system. RCDD is a designation globally recognized within the telecommunications industry.

Ten Reasons to Hire an RCDD

1 The BICSI RCDD program is the standard of the industry. Based on BICSI's *Telecommunications Distribution Methods Manual*, the RCDD designation was established by telecommunications professionals to document and standardize the base of knowledge an individual needs in order to be a telecommunications designer. This designation has become the standard measurement used to identify design experts.

2 RCDDs have demonstrated a wide range of knowledge.

Every RCDD professional has successfully completed and passed an extensive exam on the fundamentals of telecommunications distribution design.

3 RCDDs are tested from a generic perspective, giving them flexibility.

RCDDs have been tested from a generic viewpoint. They are not inhibited by specific product criteria. They exhibit innovation, advanced techniques, and long-term thinking.

4 RCDDs are often required.

The RCDD registration is recognized and mandated by many private and state organizations. Many projects today require that bids be submitted by an RCDD.

5 RCDDs exemplify professional conduct and integrity.

Professional conduct and integrity of work completed mark the RCDD expert. A relationship of trust and honor is established with you and your RCDD.

6 RCDDs must complete a structured program of continuing education.

RCDD registration renewal is required every three years. A continuing education agenda requires all active RCDDs to participate as a prerequisite to understanding and meeting all current renewal specifications.

7 RCDDs have access to a steady flow of professional, technical, and industry information.

Active RCDDs have continuous access to the latest information in the telecommunications design industry. Changes, updates, and revisions in telecommunications industry standards are known to render programs, projects, and objectives obsolete. Armed with this knowledge, your RCDD can minimize these impacts.

8 BICSI provides a wide range of training courses.

Professional training for telecommunications professionals is the objective of BICSI's courses. Every accredited, active RCDD has direct access to more than 100 training courses and seminars, including: Distribution Design, Wireless Networks, Fiber Optic Design, Grounding and Protection, Project Management, and more.

9 BICSI conferences enrich the knowledge and capabilities of the RCDD.

BICSI conferences are attended by people all over the world. Rapidly changing technology, new products, and the effects of critical issues and challenges constitute the primary focus of BICSI conferences.

10 RCDDs have ready access to telecommunications resources.

Through membership in BICSI, RCDDs have the capability of accessing nearly 20,000 telecommunications professionals in all facets of the industry.

Should I Apply for the RCDD Designation?

You may want to apply for the professional RCDD designation if you have a minimum of two years' experience in the design of telecommunications infrastructure and are one of the following:

- Telecommunications designer, consultant, project manager, or systems integrator (from either the regulated or deregulated sectors of the telecommunications industry),
- Professional Engineer (PE) actively involved in designing and specifying telecommunications and/or data communications systems,
- Telecommunications or data specialist working within a corporation or design firm (such as architectural, engineering, or communications), or
- Someone who provides direct design support for a telecommunications/data communications company with a design/systems integration staff.

The RCDD designation is recognized globally within the telecommunications industry, and can aid in your career development, enhance your professional status, and expand your opportunities. For more information, contact BICSI (see back panel for contact information).

What is BICSI®?

BICSI was founded in 1974 to serve and support telephone company building industry consultants (BICs) responsible for the design and distribution of telecommunications wiring in commercial and multi-family buildings. BICSI is a not-for-profit association assisting telecommunications professionals with their careers by providing training, certification, conferences, and publications in the design and installation of voice, data, and video technologies.

Headquartered in Tampa, Florida, BICSI has offices in Australia, Brazil, Japan, Mexico, and the United Kingdom. The membership base of nearly 20,000 covers over 90 countries around the world.
